Multimodal Transportation Management and Supply Chain Execution

Keeping Your Supply Chain in Motion
Who We Are

A worldwide leader in logistics software, Kewill empowers organizations to efficiently MOVE goods and information across the global supply chain.

Kewill delivers quantifiable value to our customers by forging long-term partnerships that enable them to minimize risk, grow their business and respond to changing market dynamics. The Kewill MOVE® platform helps companies collaborate, reduce costs, manage volatility and automate processes across the entire supply chain – from transportation and warehousing to compliance and visibility.

Kewill, a Francisco Partners portfolio company, supports supply chain execution activities for 7,500 companies in over 100 countries.
Kewill MOVE® is a multimodal transportation management platform designed to accelerate the speed, accuracy and transparency of global logistics, transportation and warehousing.

Solutions offered on our MOVE platform allow you to address your specific needs in the areas of transportation management, customs management, warehouse management, visibility and collaboration. With its modular design, our platform allows you to first target the areas of your business that require immediate attention, and then expand strategically.
Logistics Service Providers

As a logistics service provider managing 3PL/4PL services, organizations rely on you to handle one of the most critical aspects of their business. Global supply chains are complex, dispersed and multi-faceted, and your ability to manage them effectively across multiple firms is critical to your success. Imagine the power of gaining greater visibility and control across your global logistics network – with a common view and comprehensive set of tools to manage it all.
With on-premises or SaaS/Cloud deployment options, the Kewill MOVE platform can help you:

• Manage all facets of transportation and warehousing to gain early insight into potential trade barriers and greater control over network volatility.

• Effectively manage air, sea, rail and road requirements for full-load, pallet and parcel deliveries on a local, national, regional or global scale.

• Improve the efficiency of warehouse management and inventory management processes and provide inventory visibility to your suppliers and customers.

• Actively manage customs and trade compliance and stay informed of changing trade regulations around the world.
WHO WE HELP

Chemical Companies

As a chemical manufacturer you face logistics challenges far beyond those of most businesses. You’re producing products that can be combustible, corrosive, poisonous, or temperature sensitive – or some combination thereof. In addition to adhering to strict health, safety, security and environmental guidelines, you’re faced with finding qualified personnel and specialized equipment to move your product.
The Kewill MOVE platform can help you:

- Gain a holistic view of your supply chain network with end-to-end visibility and product tracking across your most critical logistics processes.
- Capture regulatory and safety information throughout the process.
- Actively manage customs and trade compliance and stay informed of trade regulations around the world.
- Standardize large volumes of data, automate routine processes and be alerted to exceptions and potential issues.
Freight Forwarders

Freight forwarding requires a unique combination of multimodal transportation and compliance expertise. As a forwarder, you have a host of challenges that you need to deal with on a day-to-day basis – tight margins, fluctuating demand, volatile costs, and a host of complex customs regulations. It’s imperative that you have strong visibility and the agility to respond to issues immediately to ensure goods are delivered on time.
• Gain end-to-end visibility across all global shipments for your customers.

• Lower costs by automating processes, reporting and documentation.

• Streamline the shipment process with a single platform that manages your connectivity with global carriers and customs authorities – and stay current on changing customs and trade compliance regulations around the world.

• More effectively manage air, sea, rail and road requirements for full-load, less than truckload, pallet and parcel deliveries on a local, national, regional or global scale.
Retailers

The retail landscape is changing nearly every day. The e-commerce revolution has created educated consumers who demand a say in how and when their goods get delivered. Product volumes are high, the complexity of product sourcing and shipment continues to increase, and the rate at which data is created continues to accelerate. Your ability to respond quickly to changing market demands is dependent on access to critical supply chain information at exactly the moment you need it. Success can only be achieved through seamless execution of your orders and deep collaboration with your trading partners.
With enterprise and SaaS/Cloud deployment options, the Kewill MOVE platform can help you:

- Better manage global, regional and local trade shipments as well as parcel deliveries and drop shipments.
- Gain a holistic view of your logistics network with end-to-end visibility and product tracking across your most critical fulfillment processes.
- Connect, integrate and collaborate with trading partners through a number of messaging formats, including EDI.
- Standardize large volumes of data, automate routine processes and be alerted to exceptions and potential issues.
As a food and beverage company, you are faced with increasing food safety regulations and product tracking requirements. The need for better visibility and granularity of information is more vital now than ever before. It is no longer enough to know when a container has shipped or when it has arrived. Companies now need to know the exact contents of each container, the weight, and often the temperatures that container has been subjected to. The timing and visibility of shipments has become critically important, as retailers are now quick to penalize shippers for imperfect orders.
With enterprise and SaaS/Cloud deployment options, the Kewill MOVE platform can help you:

• Gain a holistic view of your supply chain network with end-to-end visibility and product tracking across your most critical logistics processes.
• Capture regulatory information, such as weights and temperatures, throughout the transport process.
• Proactively initiate corrective action on inventory moving through the supply chain.
• Benefit from multimodal transportation expertise and logistics management capabilities that are unmatched in the industry.
As a manufacturer, you face the realities of logistics cost volatility, changing supplier landscapes, complex transportation networks, country-specific compliance regulations and growing volumes of data. Each day, your global supply chain evolves and expands, making visibility and agility more difficult. In addition to the optimization tools to create efficient, streamlined supply chains, Kewill provides manufacturers with the visibility and command capabilities necessary to handle unexpected shipment delays due to weather, supplier issues or transport challenges.
• Gain a holistic view of your supply chain network with end-to-end visibility and product tracking across your most critical logistics processes.

• Effectively manage air, sea, rail and road requirements for full-load, pallet and parcel deliveries on a local, national, regional or global scale.

• Actively manage customs and trade compliance and stay informed of trade regulations around the world.

• Standardize large volumes of data, automate routine processes and be alerted to exceptions and potential issues.
As a customs broker, customers rely on you to keep pace with domestic and international trade and customs compliance requirements to ensure goods keep moving on schedule. Frequently changing international regulations and myriad export documentation rules and formats create the possibility of delays and penalties. As the risk and complexity grows, you need deep knowledge and powerful systems to deliver the service your customers demand.
With enterprise and SaaS/Cloud deployment options, the Kewill MOVE platform can help you:

- Manage connectivity to all customs authorities and stay current on all trade regulations.
- Gain end-to-end visibility across all customer shipments to ensure smooth flow of goods and adherence to all relevant compliance regulations.
- Lower costs and ensure accuracy by automating processes, reporting and documentation by country, commodity and mode of transportation.
- Reduce entry time, errors and penalties through automated workflows and customs validations procedures.
Carriers

Your success depends on your ability to maximize capacity, minimize costs and keep goods moving. As a carrier, you face fluctuating demand, volatile fuel costs, increasing compliance regulations and rapidly-changing customer requirements around schedules and handling of cargo.
As an over-the-road truck carrier or ocean carrier, the Kewill MOVE platform can help you:

- Effectively manage all types of truck and sea freight, including FTL, LTL, parcel, deep sea, short sea, FCL, LCL, RO/RO, break-bulk, inland transport and feeder operations.
- Handle multimodal transportation requirements and documentation for air, ocean, road and rail.
- Actively manage customs and trade compliance and stay current on trade regulations around the world.
- Oversee all port operations, including arrivals, stays, departures, loadings, dischargings, bunkerings, crew changes, gang activities and crane moves.
Our People

>>> We understand that the Kewill MOVE® platform is critical to the success of your business. Kewill strives for quality in all aspects of product and service delivery to give you the best possible experience.

Whether you need consulting, training or support, we have experts around the world on call and ready to help you achieve greater agility across your logistics operations and keep your supply chain in motion.

With best-in-class service, Kewill has successfully implemented solutions for 7,500 customers in 100 countries.
Consulting >>

As the foundation of your logistics operations, a successful implementation of Kewill software is critical from the start. Our global Professional Services Group has in-depth understanding of transportation, logistics, customs, trade compliance and the full breadth of the Kewill MOVE platform. To maximize your return on investment in Kewill, we offer services in systems integration, infrastructure and managed services, and software development.

Training >>

To help you utilize the Kewill platform to its full potential, we offer global training programs tailored to your specific business needs. Popular training delivery methods include classroom training at the Kewill Education Center, on-site training at your location, online training modules and completely customized training programs.

Support >>

Kewill customer support offerings ensure you receive the highest level of service, availability and responsiveness. With regional support centers in Asia, Europe, North America and a large development center in India, we are able to deliver exceptional service worldwide. To keep you up and running, Kewill support services include regional support teams, 24/7 support plans, online incident submission, remote diagnostics tools and a self-service knowledge base.
To provide you with a complete solution, Kewill has developed a global partner network with deep expertise in logistics operations, multimodal transportation management, technical integration and global trade.

By tapping into our partner ecosystem, Kewill customers gain access to best-of-breed solutions, proven integrations to existing enterprise systems, certified compliance and support for innovative new services that deliver global agility.

Kewill channel partners, value added resellers, consulting partners, systems integrators and technology partners form a vast solution network to help you deliver seamless supply chain execution.
Next Steps
